PROFILE

Junior Software Developer specializing in Java, Spring Boot, and Angular, with hands-on experience building and maintaining RESTful APIs and PostgreSQL-backed systems for an enterprise back-office platform.

EXPERIENCE

Junior Developer

2024 – Present

Ideal Solutions

- Designed, built, and maintained 300+ secure RESTful API endpoints for an enterprise back-office platform in the automotive industry, using Spring Boot with authentication, authorization, and data validation.
- Engineered the data layer using Spring Data JPA/JDBC and PostgreSQL, covering schema design, migrations, and complex query development to support evolving business requirements.
- Delivered Angular Material front-end features, including dynamic table views and detailed editing pages, to streamline day-to-day workflows for end users.
- Improved system performance by optimizing CSV import/export pipelines and refining database queries, reducing processing overhead for large data sets.
- Adapted to a dynamic team that scaled from 4 to 13 developers and back down to 2, being consistently selected to contribute across every project phase.
- Deployed and supported applications on AWS cloud infrastructure.

EDUCATION

IT Systems Developer

2021 – 2022

CTU Training Solutions, Pretoria, GP

IT Systems Development graduate. Trained in application development, software engineering practices, and team-based project delivery.

Self-directed Study — Cybersecurity

2022 – 2024

Independent

Network analysis, threat detection, and ethical hacking principles. Built PeekWatch — a terminal network monitor with CSV export — as an applied project.
